

# Version Information

version	Change Description	Change person	date
1.0.0	Add the first edition of Interface Description	liyunfei	2019/9/10
1.0.1	Update content, add a core business process diagrams	liyunfei	2018/9/12
1.0.2	Change to English document	liyunfei\zhangheng g	2020/01/09

## Schedule 1:

Explanations on transaction ID		
Definition	Type is unified as unsigned long long type (u64) .	
High 32-bit represents request source, client side generation	No. 61-64bit	4bit client side type (range 0-15) : 0-others 1-NVR main program 2-GUI 3-network client side 4-CGI client side 5-trade external hanging .....
	No. 33-60bit	28bit client side sole identification: when the request is initiated each time, the client side itself generates a non-repetitive identification code for distinguishing multiple client sides of same type.
Low 32-bit represents transaction, main program human face module distribution	No. 25-32bit	8bit transaction type (range 0-255) : 0-others 1-video stream analysis 2-picture stream analysis 3-single picture analysis 4-feature calculation .....
	No. 1-24bit	24bit (frame/picture/request) No.: cyclic increase

## 1 Overview

This document is a description of the application interface related to the face database. It mainly implements operations such as adding, deleting, modifying,

and checking the face database, and adding, deleting, modifying, and checking the face basemap..

This document is suitable for developers who use the web-API interface (CGI protocol) to connect with Tiandy's intelligent face-related products. The docking vendors can find and use related interfaces to implement different functions according to their needs. For the specific usage of the interface, refer to the interface description below..

Encoding : UTF-8

Request agreement : HTTP

**Request method** : GET/PUT/POST/DELETE

### 1.1.1 Public request header

Public request header (excluding other HTTP request headers)

Header	Description
Content-Type	application/xml;charset=UTF-8
Accept	application/xml;charset=UTF-8

### 1.1.2 Public response header

Public response headers (excluding other HTTP request headers)

Header	Description
Content-Type	application/xml;charset=UTF-8
Accept	application/xml;charset=UTF-8

## Interface use instructions and examples

### 2.7.47 Acquire parameters of face recognition library in batch

<b>url:</b> <b>/CGI/Smart/FaceLib/Manage</b>	
<b>GET</b>	
<b>Description</b>	Acquire parameters of face recognition library in batch
<b>Query</b>	None

<b>Inbound Data</b>	None
<b>Success Return</b>	<b>&lt;FaceLibInfo&gt;</b>
<b>Explanations on protocol:</b>	
Acquire parameters of face recognition library in batch	
<b>Explanations on key parameters:</b>	
<facePicModelNum> Picture amount of established models	
<facePicNum> Total number of base map	
<key> key value of face library	
<name> Face library name, 64 bits at most	
<descripInfo> Description information, 64 bits at most	
<lock> Whether locked; 1: Locked; 0: Unlocked	

### FaceLibParas XML Block

```
<?xml version="1.0" encoding="UTF-8"?>
<faceLibInfo>
<facePicModelNum><!-- req, xs: integer --></facePicModelNum>
<facePicNum><!-- req, xs: integer --></facePicNum>
<faceLibParasList>
<faceLibParas>
<key><!-- req, xs: integer --></key>
<name><!-- req, xs:string --></name>
<descripInfo><!-- dep, xs:string --></descripInfo>
<lock><!-- req, xs: integer --></lock>
</faceLibParas>
//...Repeat <faceLibParas > Structure
</faceLibParasList>
```

### Test cases

**GET /CGI/Smart/FaceLib/Manage**

**Request XML: none**

**Response XML: <FaceLibParas>**

```
<?xml version="1.0" encoding="UTF-8"?>
<faceLibInfo>
<facePicModelNum>100</facePicModelNum>
<facePicNum>500</facePicNum>
<faceLibParasList>
<faceLibParas>
<key>2</key>
<name> R&D library</name>
<descripInfo> R&D staff library</descripInfo>
<lock>1</lock>
</faceLibParas>
...
</faceLibParasList>
</faceLibInfo>
```

## 2.7.46 Add、Set、delete face recognition library

<b>url:</b>	
/CGI/Smart/FaceLib/<Key>/Manage	
<b>POST</b>	
<b>Description</b>	Add face recognition library
<b>Query</b>	None

<b>Inbound Data</b>	<b>&lt;FaceLibParas&gt;</b>
<b>Success Return</b>	<b>&lt;FaceLibResult&gt;</b>
<b>PUT</b>	
Set face recognition library	Set face recognition library
<b>Query</b>	None
<b>Inbound Data</b>	<b>&lt;FaceLibParas&gt;</b>
<b>Success Return</b>	<b>&lt;ResponseStatus&gt;</b>
<b>DELETE</b>	
<b>Description</b>	Delete face recognition library
<b>Query</b>	None
<b>Inbound Data</b>	None
<b>Success Return</b>	<b>&lt;ResponseStatus&gt;</b>
<b>Explanations on protocol:</b>	
Acquire, set, add and delete parameters of face recognition library and check if library has lock and password.	
Introduction to key parameters: URL <Key> key value of face library; key=0 means adding of face library; key>0 means setting of face library parameters; long: Long type	
Request xml <name> Face library name, 64 bits at most <descripInfo> Description information, 64 bits at most <threshold> Face library dependability, >=0 <lock> Whether library is locked; 1: Locked; 0: Unlocked <access> Random information, for calibration use; 32 bits <password> Lock password, encrypted, 16 bits at most	
Response xml <key> key value of face library, responded when adding value. -1 means failure	

#### FaceLibParas XML Block

```
<?xml version="1.0" encoding="UTF-8"?>
<faceLibParas>
<name><!-- req, xs:string --></name>

</faceLibParas>

<!-- Face library deletion -->
<!--Delete /CGI/Smart/FaceLib/<Key>/Manage-->
<!--<Key> Use the corresponding library Id -->
<!--response Universal-->
<!-- Callable /CGI/Smart/FaceLib/<Key>/Del/Progress View progress -->

```

## 2.7.75 Face library deletion progress

<b>url:</b>	<b>/CGI/Smart/FaceLib/&lt;key&gt;/Del/Progress</b>
<b>GET</b>	
<b>Description</b>	Face library deletion progress
<b>Query</b>	<b>None</b>
<b>Inbound Data</b>	<b>None</b>
<b>Success Return</b>	<b>&lt;Progress&gt;</b>
<b>Explanations on protocol:</b> Deletion progress of face library	
<b>Explanations of parameters:</b> URL: <key>: Face library key value Reply xml: <state> State; 0-Undeleted; 1-Delete in progress; 2-Deleted; 3-Deletion fails <pro> Progress, 0-100	

### Progress XML Block

```

<?xml version="1.0" encoding="UTF-8"?>
<progress version="1.0">
<state><!--req,sx:integer--></state>
<pro><!--req,sx:integer--></pro>

```

```
</progress>
```

**Test cases****GET /CGI/Smart/FaceLib/<key>/Del/Progress****Response XML: <Progress>**

```
<?xml version="1.0" encoding="UTF-8"?>
<progress version="1.0">
<state>1</state>
<pro>50</pro>
</progress>
```

## 2.7.49 Export face library, request of starting export

<b>url:</b>	
<b>/CGI/Smart/StartExport/FaceLib/&lt;Key&gt;/SessionId/&lt;ID&gt;/File/&lt;FileName&gt;/Access/&lt;Access&gt;/Password/&lt;Password&gt;</b>	
<b>PUT</b>	
<b>Description</b>	Export face library, request of starting export
<b>Query</b>	<b>None</b>
<b>Inbound Data</b>	<b>None</b>
<b>Success Return</b>	<b>&lt;ResponseStatus&gt;</b>
<b>Explanations on protocol:</b> Export face library	
<b>Explanations of parameters:</b> <Key> key value of face library <sessionId> client side and equipment interaction ID, refer to Schedule 1 <FileName> Export filename, 128 bits <Access> means random information, for calibration use, 32 bits <PassWord> Export password, encrypted transmission, 16 bits	

**Test cases****PUT**

/CGI/Smart/StartExport/FaceLib/123/SessionId/456/File/0.jpg/Access/94AAABB419A9820DC171B43240CEE41/Password/T6g05arqzu4=

Request XML: none

Response XML: <ResponseStatus>

```
<!--Face library starts to generate box-->
<!--Put /CGI/Smart/StartExport/FaceLib/<Key>/SessionId/<ID>/File/<FileName>-->
<!-<Key> Use the corresponding library Id , <ID> Depends on the current time to obtain a
random decimal number between 0x4000 ~ 0xffff, <FileName>box filename-->
<!—response Universal-->
<!-- Get progress agreement after /CGI/Smart/FaceLib/SessionId/<ID>/Progress , When the
progress is 100, call again /CGI/Smart/Export/LocalFile/<FileName> Form download file -->
```

## 2.7.50 Import/export face library progress

**url:**

/CGI/Smart/FaceLib/SessionId/<ID>/Progress	
<b>GET</b>	
<b>Description</b>	Import/export face library progress
<b>Query</b>	<b>None</b>
<b>Inbound Data</b>	<b>None</b>
<b>Success Return</b>	<b>&lt;Progress&gt;</b>
<b>Explanations on protocol:</b> Progress of importing/exporting face library	
<b>Explanations of parameters:</b> URL: <sessionId> client side and equipment interaction ID, refer to Schedule 1 Reply xml: <state> State; 0-Not imported/exported; 1-Import/export in progress; 2-Import/export succeeds; 3-Export/import fails <pro> Progress, 0-100	

#### Progress XML Block

```
<?xml version="1.0" encoding="UTF-8"?>
<progress version="1.0">
<state><!—req,sx:integer--></state>
<pro><!—req,sx:integer--></pro>
</progress>
```

#### Test cases

GET /CGI/Smart/FaceLib /SessionId/123/Progress

#### Response XML: <Progress>

```
<?xml version="1.0" encoding="UTF-8"?>
<progress version="1.0">
<state>1</state>
<pro>50</pro>
</progress>
```

```
<!-- Face library generation box progress / Face library box package add basemap progress -->
<!--Get /CGI/Smart/FaceLib/SessionId/<ID>/Progress-->
<!--<ID> Depends on the current time to obtain a random decimal number between 0x4000 ~
0x4fff -->
<!--response-->
<progress>
  <stat><!—0-Not imported / exported, 1-Imported / exported, 2-Imported / exported
successfully, 3-Imported / exported failed --></stat>
  <pro><!— Progress value, 0-100--></pro>
</progress>
```

## 2.7.60 Export face picture

**url:**

/CGI/Smart/Export/FacePic/<Key>/SessionId/<ID>/File/<FileName>

<b>GET</b>	
<b>Description</b>	Export face picture
<b>Query</b>	<b>None</b>
<b>Inbound Data</b>	<b>None</b>
<b>Success Return</b>	<b>File content</b>
<b>Explanations on protocol:</b> Export face picture	
<b>Explanations of parameters:</b> <key> Face key value <sessionId> client side and equipment interaction ID, refer to Schedule 1 <fileName> File name	

#### Test cases

GET /CGI/Smart/Export/FacePic/123/SessionId/456/File/0.jpg

Request XML: none

Response XML: File contents

```
<!-- Face library box file export -->
<!--Post /CGI/Smart/Export/LocalFile/<FileName>-->
<!--Post /CGI/Smart/Export/LocalFile/<FileName>/Access/<Access>/Password/<Password>
encryption -->
<!--<FileName>box filename,
/CGI/Smart/StartExport/FaceLib/<Key>/SessionId/<ID>/File/<FileName> Consistent with
protocol file name -->
<!--<Access> Secret key, <Password> password -->
<!-- Form download file -->
```

## 2.7.48 Import face library

<b>url:</b>	/CGI/Smart/Import/FaceLib/<Key>/SessionId/<ID>/Access/<Access>/Password/<Password>
<b>PUT</b>	
<b>Description</b>	Import face library
<b>Query</b>	<b>None</b>
<b>Inbound Data</b>	<b>File content</b>
<b>Success Return</b>	<b>&lt;ResponseStatus&gt;</b>
<b>Explanations on protocol:</b> Import of face library	
<b>Explanations of parameters:</b> <Key> key value of face library <sessionId> client side and equipment interaction ID, refer to Schedule 1 <Access> means random information, for calibration use, 32 bits <PassWord> Import password, encrypted transmission, 16 bits	

#### Test cases

**PUT**  
**/CGI/Smart/Import/FaceLib/123/SessionId/456/Access/94AAABB419A9820DC171B43240C  
EEF41/Password/T6g05arqzu4=**  
**Request XML:** none  
**Response XML:** <ResponseStatus>

```
<!-- Face library box file import -->
<!--Post /CGI/Smart/Import/FaceLib/<Key>/SessionId/<ID>-->
<!--Post

**Request XML: <ResetFaceModel>**  
**Response XML: <ResponseStatus>**

```
<?xml version="1.0" encoding="UTF-8"?>
<resetFaceModel>
<libKey>0</libKey>
<faceKey>0</faceKey>
<resetOpt>1</resetOpt>
</resetFaceModel>
```

```
<!-- Face Modeling -->
<!--Put /CGI/Smart/Face/Reset/Model-->
<!--request-->
<resetFaceModel>
    <libKey><!-- Face library id --></libKey>
    <faceKey><!-- Face map id--></faceKey>
    <resetOpt><!--1 rebuild all, 2 specify faceKey, 3 specify libKey --></resetOpt>
</resetFaceModel>
```

## 2.3.47 Get and set the authentication enable status

<b>url:</b>	
<b>/CGI/System/Identify/Enable/State</b>	
<b>GET</b>	
<b>Description</b>	Get the authentication enable status
<b>Query</b>	<b>None</b>
<b>Inbound Data</b>	<b>None</b>
<b>Success Return</b>	<b>&lt;enableState&gt;</b>
<b>PUT</b>	
<b>Description</b>	Set the authentication enable status
<b>Query</b>	<b>None</b>
<b>Inbound Data</b>	<b>&lt;enableState&gt;</b>
<b>Success Return</b>	<b>&lt;ResponseStatus&gt;</b>
<b>Explanations on protocol:</b> Whether enabling authentication	
<b>Explanations of parameters:</b> <identifyEnable> true: Enable authentication; false: Disable authentication	

### EnableState XML Block

```
<?xml version="2.0" encoding="UTF-8"?>
<enableState>
    <identifyEnable><!--req, xs:Boolean "true, false"--></identifyEnable>
</enableState>
```

### Test cases

GET /CGI/System/Identify/Enable/State

Request XML: none

Response XML: <EnableState>

PUT /CGI/System/Identify/Enable/State

Request XML: <EnableState>

```
<enableState>
    <identifyEnable>true</identifyEnable>
</enableState>
```

Response XML: <ResponseStatus>

```
<!-- Face database enabled authentication status -->
<!--Get /CGI/System/Identify/Enable/State-->
<!--response-->
<enableState>
    <identifyEnable><!-- true enables authentication, false disables authentication
--></identifyEnable>
```

```
</enableState>
```

## 2.7.55 Query face information

<b>url:</b>	
<b>/CGI/Smart/FacePic/Query</b>	
<b>POST</b>	
<b>Description</b>	Query face information
<b>Query</b>	<b>None</b>
<b>Inbound Data</b>	<b>&lt;FacePicQueryCondition&gt;</b>
<b>Success Return</b>	<b>&lt;FacePicQueryResult&gt;</b>
<b>Explanations on protocol:</b> Query face data	
<b>Explanations of parameters:</b> Query xml: <pageNo> Page, pageNo >=0 <pageSize> Item per page, pageSize>=0 <libKey> key value of face library, LibKey>=0, No retrieval -1 <model> Modeling status; 0-Neglected; 1-Modeling succeeds; 2-Modeling fails; 3-No modeling <name> Name, 64 bits at most, support query of wildcard characters, such as Zhang *, Li Si *, Wang * Wu, * Liu, no retrieval "####" <sex> Gender; 0-Neglected; 1-Male; 2-Female; no retrieval -1 <birthDayStart> Start time of birthday, 2017-10-19, 16 bits at most <birthDayEnd> End time of birthday, 2017-10-19, 16 bits at most <nation> Nationality, as per national standard code, no retrieval-1 <province> Native place, province, as per code of national administrative division; 0 means unknown; no retrieval-1 <city> Native place, city, as per code of national administrative division; 0 means unknown; no retrieval-1 <certType> Certificate type; 0-Unknown; 1-ID card; 2-Certificate of officer; 3-Passport; 4-Staff No; no retrieval-1 <certNum> Certificate No., 64 bits at most, no retrieval "####" <country> Country, as per national and local ISO 3166-1 code table (see figure); no retrieval-1 <address> Address, 64 bits at most, no retrieval "####" <company> Company name, 64 bits at most, no retrieval "####" <access> Random information, for calibration use; 32 bits <password> Library password, encryption supports 16 bits at most Return statusCode:9 if password authentication fails statusString:"Securitycode Failed" subStatusCode:"CodeError"	
<b>Reply xml:</b> <totalCount> Total count <pageSize> Total count of current page <index> Page No. <libKey> key value of face library <faceKey> Face key value <facePath> http path <downloadfacePath> File download path (encrypted, avoid digest authentication to satisfy CGI) <model> Whether modeling; 0-Not establish model; 1-Establish model; send 1 during single import; send 0 during batch import <name> Name, 64 bits at most	

```

<sex> Gender; 0-Unknown; 1-Male; 2-Female
<birthday> Birthday; format: 2018-07-24, 16 bits at most

## 2.7.66 Acquire NVR performance

/CGI/Smart/Property/Dev/<ID>	
<b>GET</b>	
<b>Description</b>	Acquire NVR performance
<b>Query</b>	None
<b>Inbound Data</b>	None
<b>Success Return</b>	<Property>

**Explanations on protocol:**

This protocol is prepared for acquiring the NVR performance. Dev: Device No., reserved, 0 as default; device type: 0 nvr 1 ipc.

**Explanations on key parameters:**

<total> Total device performance, 16 as default  
<itemList>  
<item>  
<type> Type: 1. NVR face detection; 2. NVR face recognition; 3: IPC face detection; 4. IPC face recognition  
<algtype> Algorithm type: Behavior: Behavior analysis; face: Face recognition; Human: Human detection; Pept: Oilfield monitoring; PeopleNumAlarm: People number error alarm; Audio: Audio diagnosis; Video: Video diagnosis; Group: Group; OnDuty: On-duty detection; person amount statistics, PlatLicense: Place recognition; ParkGuard: Park guard; IllegalPark: Illegal park; IntelliTrace: Intelligent traction; structurization: Structuration; Helmet: Helmet; Prctduty: Single interrogation/unattended; Sleep: Sleep; NewFight: New fight; GetUp: Get up; HeightLimit: Height limit; NewDuty: New duty; Stranded: Stranded; Alone: Alone; Delivergoods: Deliver goods; FaceMosaic: Face mosaic; ColorTrack: Color traction; Loitering: Loitering; AttendedBaggage: Attended baggage; UnattendedBaggage: Unattended baggage  
<everyProperty> Performance of every circuit  
<cnt> Enabling amount  
<maxCnt> Max. enabling amount

**Property XML Block**

```
<?xml version="1.0" encoding="UTF-8"?>
<Property>
<total><!-- req, xs: integer --></total>
<itemList>

<everyProperty><!-- req, xs: integer --></everyProperty>
<cnt><!-- req, xs: integer --></cnt>
<maxCnt><!-- req, xs: integer --></maxCnt>
</item>
</itemList>
</Property>
```

**Test cases****GET /CGI/Smart/Property/Dev/0****Request XML: none**

```
<?xml version="1.0" encoding="UTF-8"?>
<Property>
<total>16</total>
<itemList>
<item>
<type>1</type>
<everyProperty>1</everyProperty>
<cnt>1</cnt>
</item>
<item>
<type>2</type>
<everyProperty>1</everyProperty>
```

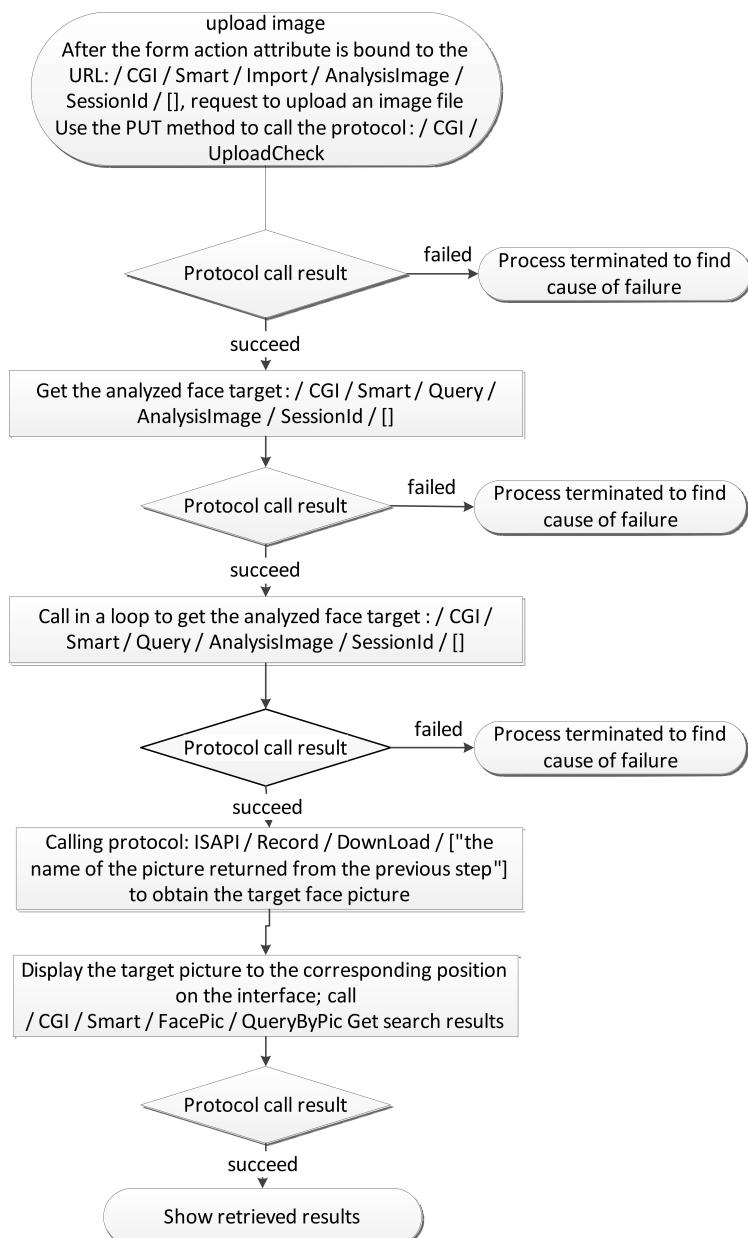

```
<cnt>1</cnt>
</item>
</itemList>
</Property>
```

## 2.10.1 Make request for file uploading

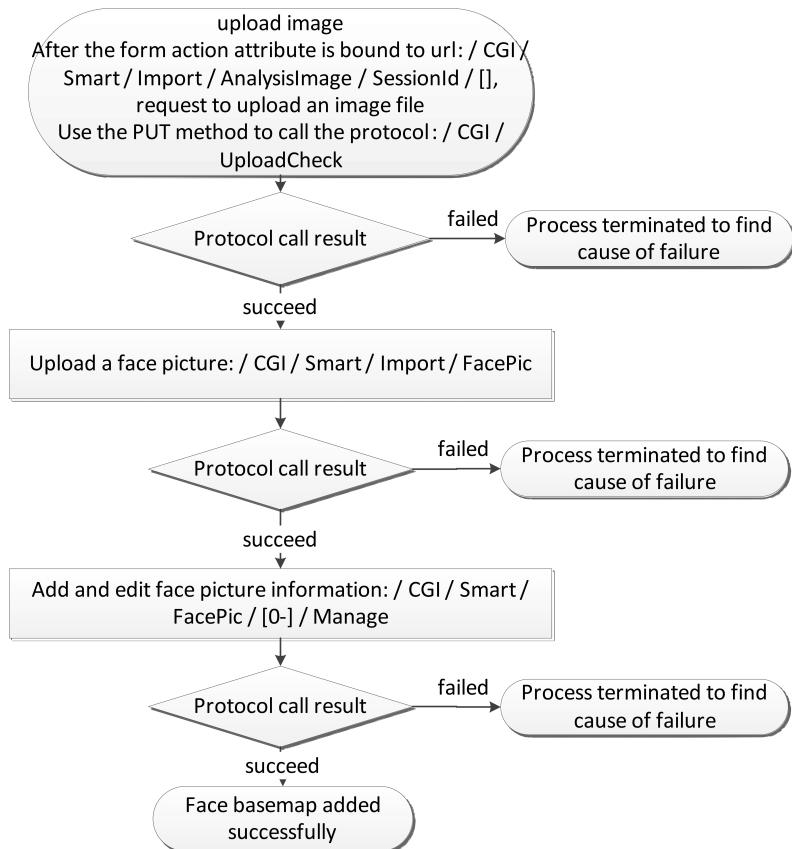

<b>url:</b>	
<b>/CGI/UploadCheck</b>	
<b>GET</b>	
<b>Description</b>	Make request for file uploading
<b>Query</b>	None
<b>Inbound Data</b>	None
<b>Success Return</b>	<b>&lt;ResponseStatus&gt;</b>
<b>Explanations on protocol:</b>	
This protocol is prepared for make request for file uploading, helping client or IE make request for file uploading via CGI protocol. Send this protocol before file uploading for calibration.	

## 2 Interface call flow chart

### **3.1 Find by image**

### 3.2 Face basemap added

## 3 Response status code

### 4.1 Business response status code

Common HTTP status codes and field values in the response body:

Status Code	Description
200 OK	Successful operation
400 Bad Request	Operation exception, exception information in statusString field
401 Bad Request	Insufficient permissions

### 4.2 Response body

1. Successful:

return value: 200

statusCode:1

statusString:"OK"

subStatusCode:"ok"

Description: Return after successful setting.

CGI code: xml\_responses\_status(\_pcHttpReq, \_pcXmlRsp, STATUS\_CODE\_OK,  
STATUS\_CODE\_OK\_1);

2. failure:

return value: 400

statusCode:2

statusString:"Device Busy"

subStatusCode:"deviceBusy"

Description: Return after setting failure.

CGI code: xml\_responses\_status(\_pcHttpReq, \_pcXmlRsp, STATUS\_CODE\_DEVBUSY,  
STATUS\_CODE\_DEVBUSY\_4);

statusCode:3

statusString:"Device Error"

subStatusCode:"deviceError"

Description: Return after setting failure.

CGI code: xml\_responses\_status(\_pcHttpReq, \_pcXmlRsp, STATUS\_CODE\_DEVERR,  
STATUS\_CODE\_DEVERR\_1);

statusCode:4

statusString:"Invalid Operation"

subStatusCode:"notSupport"

Description: Return when using a non-existent instruction. For example, a protocol has only put, but the user calls get.

CGI code: xml\_responses\_status(\_pcHttpReq, \_pcXmlRsp, STATUS\_CODE\_INVALID\_OPERATE,  
STATUS\_CODE\_INVALID\_OPERATE\_1);

S

statusCode:4

statusString: "Invalid Operation"

subStatusCode: "invalidOperation"

Description: Returns after failing to obtain the ID in the URL. Such as getting the channel ID in the url

CGI code: xml\_responses\_status(\_pcHttpReq, \_pcXmlRsp, STATUS\_CODE\_INVALID\_OPERATE,  
STATUS\_CODE\_INVALID\_OPERATE\_6);

statusCode:5

statusString:"Invalid XML Format"

subStatusCode:" badXmlFormat"

Description: returned when the xml format is wrong.

CGI code: xml\_responses\_status(\_pcHttpReq, \_pcXmlRsp, STATUS\_CODE\_INVALID\_XMLFORMAT,

```

STATUS_CODE_INVALID_XMLFORMAT_1);

statusCode:6
statusString:"Invalid XML Content"
subStatusCode:"badXmlContent"
Description: return when the xml content is wrong.
CGI code: xml_responses_status(_pcHttpReq, _pcXmlRsp, STATUS_CODE_INVALID_XMLCONTENT,
STATUS_CODE_INVALID_XMLCONTENT_3);

statusCode:8
statusString:"IP Error"
subStatusCode:"GateWayConflict"
Description: When setting the IP or network segment, if it is occupied, the corresponding
conflict error code will be returned to the WEB browser..
CGI code: xml_responses_status(_pcHttpReq, _pcXmlRsp, STATUS_CODE_IP_CONFLICT,
STATUS_CODE_IP_CONFLICT_2);

statusCode:9
statusString:"Securitycode Failed"
subStatusCode:"CodeError"
Description: When verifying the verification code, there are many cases of failure. For example,
the verification code is wrong, the verification code is invalid, and the error reaches 5 times..
CGI code: xml_responses_status(_pcHttpReq, _pcXmlRsp, STATUS_CODE_CHECK_SECURITY_CODE,
STATUS_CODE_CHECK_SECURITY_CODE_1);

statusCode:10
statusString:"FuncExclu Failed"
subStatusCode:"WdrExcluError"
Description: When the mutual exclusion function is set at 50 \ 60 frames, there will be multiple
cases of failure, for example: WDR is not allowed to be set, and the return fails..
CGI code: xml_responses_status(_pcHttpReq, _pcXmlRsp, STATUS_CODE_FUNCEXCLU_ERR,
STATUS_CODE_FUNCEXCLU_ERR_11);

// subStatusCode Of the type described below:
STATUS_CODE_FUNCEXCLU_ERR_1    "lcd"          // Distortion correction
STATUS_CODE_FUNCEXCLU_ERR_2    "vcabaisc"      // Behavior analysis
STATUS_CODE_FUNCEXCLU_ERR_3    "vcavfd"        // Face Detection
STATUS_CODE_FUNCEXCLU_ERR_4    "vcacdd"        // Crowd gathering
STATUS_CODE_FUNCEXCLU_ERR_5    "vcacpc"        // People Counting
STATUS_CODE_FUNCEXCLU_ERR_6    "vcasvd"        // On duty detection
STATUS_CODE_FUNCEXCLU_ERR_7    "vcavideo"      // Video diagnosis
STATUS_CODE_FUNCEXCLU_ERR_8    "vcaalert"       // Alert plan
STATUS_CODE_FUNCEXCLU_ERR_9    "vcalpr"         // License Plate Recognition
STATUS_CODE_FUNCEXCLU_ERR_10   "vcaillpark"    // Illegal parking

```

```

STATUS_CODE_FUNCEXCLU_ERR_11 "wdr"           // Wide dynamic
STATUS_CODE_FUNCEXCLU_ERR_12 "videocover"      // Video occlusion
STATUS_CODE_FUNCEXCLU_ERR_13 "corridor"        // Corridor mode
STATUS_CODE_FUNCEXCLU_ERR_14 "vcaspalert"       // Featured alert
STATUS_CODE_FUNCEXCLU_ERR_15 "vcalpd"          // Parking guard
STATUS_CODE_FUNCEXCLU_ERR_16 "vcafollow"        // track
STATUS_CODE_FUNCEXCLU_ERR_17 "vcaallfolloew"    // Panoramic sphere algorithm
STATUS_CODE_FUNCEXCLU_ERR_18 "vcahat"           // Hard hat algorithm
STATUS_CODE_FUNCEXCLU_ERR_19 "antishake"         // Electronic image stabilization
STATUS_CODE_FUNCEXCLU_ERR_20 "digitalzoom"       // Electronic zoom
.....
STATUS_CODE_FUNCEXCLU_ERR_32 "allvca"          // All intelligent algorithms

```

**statusCode:**254  
**statusString:** "Parameter Error"  
**subStatusCode:** "parameterFailed"  
**Description:** General error code, this error code can be used in case of wrong parameters.  
**CGI code:** xml\_responses\_status(\_pcHttpReq, \_pcXmlRsp, STATUS\_CODE\_PARAM\_ERR,  
 STATUS\_CODE\_PARAM\_ERR\_1);

**statusCode:**255  
**statusString:** "Operation Failed"  
**subStatusCode:** "operationFailed"  
**Description:** For example, if you perform an email test, the test fails because you are not on the Internet or for other reasons.  
**CGI code:** xml\_responses\_status(\_pcHttpReq, \_pcXmlRsp, STATUS\_CODE\_COMMON\_ERR,  
 STATUS\_CODE\_COMMON\_ERR\_1);

**return value:** 403  
**statusCode:**4  
**statusString:**"Invalid Operation"  
**subStatusCode:**"badAuthorization"  
**Description:** Returned if the user does not have permission to set.  
**CGI code:** xml\_responses\_status(\_pcHttpReq, \_pcXmlRsp, STATUS\_CODE\_INVALID\_OPERATE,  
 STATUS\_CODE\_INVALID\_OPERATE\_3);

**return value:** 401  
<userCheck>  
<statusValue>401</statusValue>  
<statusString>IpFilter</statusString>  
<passwdLeftValue>0</passwdLeftValue>  
</userCheck>  
**Description:** Check failed due to black and white list, prompting "username and password are

wrong".

```
<userCheck>
<statusValue>401</statusValue>
<statusString>Unauthorized</statusString>
<passwdLeftValue>4</passwdLeftValue>
</userCheck>
```

Description: Login failed due to incorrect user or password. For each error, the passwdLeftValue is decremented by 1 and the prompt "Username or password is wrong. Lock after 5 times of passwdLeftValue errors. Lock time is 5 minutes.".
